According to claim 1, the invention in principle concerns a special urban transformation centre incorporating in its interior a cabinet with a medium to low-voltage transformer, medium-voltage cells, a low-voltage panel and a remote control panel, the urban transformation centre further comprising, on the exterior, an encasing device in the form of a telephone booth. The feature that renders this transformation centre novel and inventive, as described in the characterizing part of claim 1, apart from the polygonal design and booth-like form, is that the centre is formed from a concrete baseplate on which securing bolts are provided and from which studs for securing the entire booth structure project.

Claims 2 to 4, all dependent on claim 1, contain additional features of the external design of the transformation centre, i.e. external doors with transparent windows and with a sliding aperture for the incorporation of urban publicity, internal lighting means in the publicity-carrying doors, and the incorporation in the structure proper of telephone boxes or a touch screen, constituting a multimedia information point for the public. Similarly, claim 5, which is also dependent on claim 1, solves the problem of the heat generated in the internal casing of the transformer, discharging it through four flue-like columns.

None of the international search report citations or any appropriate combination thereof describes an urban transformation centre as mentioned in claim 1. Therefore these documents only reflect the prior art and consequently the invention can be considered to be novel, to involve an inventive step and to have industrial applicability.

Claims 2 to 5 are dependent on claim 1 such that they too meet the PCT novelty and inventive step requirements.
